PROFESSIONAL SUMMARY

Data Analyst with experience in healthcare and ESG analytics, specialising in Power BI dashboard validation, SQL/Python-based ETL pipelines, and data quality assurance. Proven track record of improving reporting accuracy and reducing manual processes by up to 30% across large-scale datasets. Skilled in transforming complex data into actionable insights, supporting KPI tracking and stakeholder decision-making. Seeking Data Analyst or BI roles in Melbourne or Perth.

TECHNICAL SKILLS

- **Data Analysis & Visualization:** Power BI (DAX), Tableau, Excel, Pandas, Matplotlib
- **Databases & Querying:** PostgreSQL, MySQL
- **Programming:** Python (ETL, data cleaning, regression models), R (statistical analysis)
- **Professional Skills:** Data storytelling, stakeholder collaboration, reporting, problem-solving

WORK EXPERIENCE

Department of Health, WA **2025**
Role: Data Systems Intern

- Validated Power BI dashboards against NSP system for syringe distribution.
- Performed data reconciliation and quality checks using Excel, identifying discrepancies between source data and dashboards and improving reporting reliability
- Investigated data pipeline and dashboard design issues, collaborating with stakeholders to resolve data connection and logic errors
- Contributed to improved data integrity and KPI reporting accuracy for public health monitoring systems

ESG Matters Industry Project – Climate Index Prototype **2025**
The University of Western Australia – Centre for Business Data Analytics
Role: Data Analyst

- Partnered with ESG Matters to design a **climate-based ESG Index** assessing 200+ ASX-listed companies.
- Collected, cleaned, and standardized sustainability data using **Python** for automation and **Tableau** for visualization.
- Built a **data-driven scoring framework** to evaluate environmental performance and support transparent benchmarking.
- Achievements: Developed a replicable analytics methodology for future sustainability data projects. Presented outcomes to ESG Matters leadership, receiving strong feedback.
- **Key Skills**: Python, Tableau, Excel, Data Cleaning, ESG Analytics, Data Visualization, Index Modelling

Viva Energy Retail, Perth **2024-Present**
Role: Customer Service Representative

- Delivered high-volume customer service, ensuring accurate transactions and operational compliance
- Resolved customer issues efficiently, maintaining service quality
- Managed cash handling and end-of-day reconciliation with high accuracy
- Collaborated with team to support smooth daily operations

Centre for Railway Information Systems, Delhi **2023**
Role: Data Analyst

- Designed and optimized PostgreSQL databases to manage complaint data, enabling structured reporting and improved data accessibility
- Built automated ETL pipelines using Python (Pandas, NumPy) to clean and process large datasets, identifying recurring service issues and trends
- Developed dashboards and SQL-based reports to analyze complaint categories, response times, and operational workloads
- Reduced manual reporting effort by 30%, improving efficiency and enabling faster data-driven decision-making

EDUCATION

University of Western Australia, Perth, WA *February 2024 – December 2025*
Master of Business Analytics
Banasthali Vidyapith, Rajasthan, India *July 2019 – May 2023*
Bachelor of Technology in Information Technology

PROJECT

Road Fatality Analysis & Pattern Mining (End-to-End Analytics Project) *September 2025*

- Built a data warehouse integrating 3 datasets (ARDD, fatalities, census), enabling structured multi-dimensional analysis
- Developed ETL pipelines in Python to clean and transform data, ensuring high-quality datasets for analysis
- Applied association rule mining (Apriori), identifying high-risk crash patterns with lift > 3.0
- Analysed demographic, geographic, and temporal trends to uncover key road safety risk factors
- Analysed demographic, geographic, and temporal trends to generate data-driven insights for road safety improvements
- Built SQL queries and dashboards to support stakeholder exploration of crash trends and risk factors

Popularity of International Cuisines in the U.S. (Power BI, Data Cleaning, Visualization) *October 2024*

- Analyzed survey data on consumer cuisine preferences across the U.S., incorporating demographics like age, gender, income, and region
- Performed data cleaning, transformation, and preparation for dashboard visualization
- Built an interactive Power BI dashboard to explore trends and highlight regional and demographic differences
- Provided actionable insights for restaurant and food businesses, identifying top cuisines (Italian, American, Mexican) and potential niche markets
- Supported data-driven decision-making for menu planning and marketing strategy

COVID-19 Socioeconomic Impact Analysis (R, Logistic Regression, EDA) *June 2024*

- Analyzed **2,000+ survey records** from the Regional Gender Assessment dataset to evaluate the impact of COVID-19 on vaccination, employment, and food security in Kiribati
- Performed **exploratory data analysis (EDA)** to identify trends across demographics including age, gender, education, and employment
- Built a **logistic regression model** to predict vaccination likelihood, identifying **age and education as significant predictors ($p < 0.001$)**
- Generated **data-driven policy insights** to support targeted public health interventions and economic recovery strategies
